

Security Tech Germany

Feel secure at home

Vela.2000 locking system

MADE IN
GERMANY

Security Tech Germany

The benefits

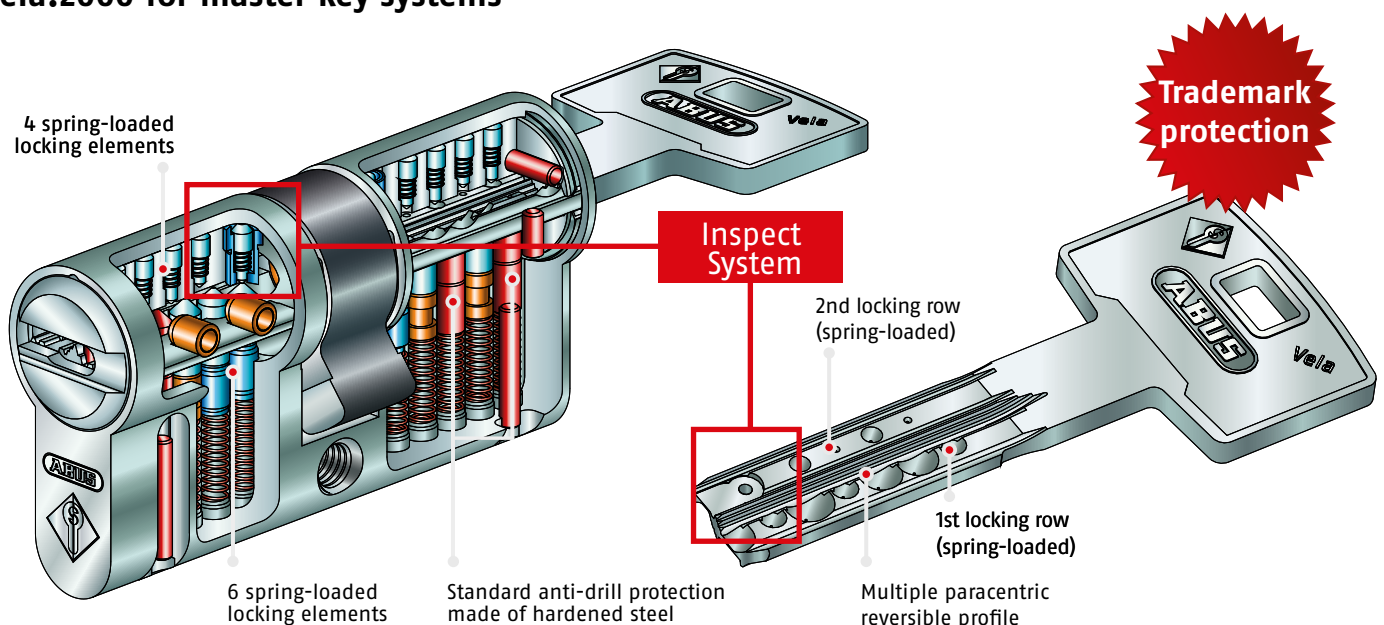

- Additional detection of access authorization with the Inspect System
- Greater locking convenience thanks to modern reversible key with horizontal key insertion
- Ideal for small master key systems, for example in apartment buildings and small commercial properties
- Perfect for flats and private homes, either as a single-differ lock or as keyed-alike cylinders

At a glance

- Inspect System
- Multiple paracentric reversible profile
- 6-pin reversible key system
- 10 spring-loaded locking elements in two locking rows

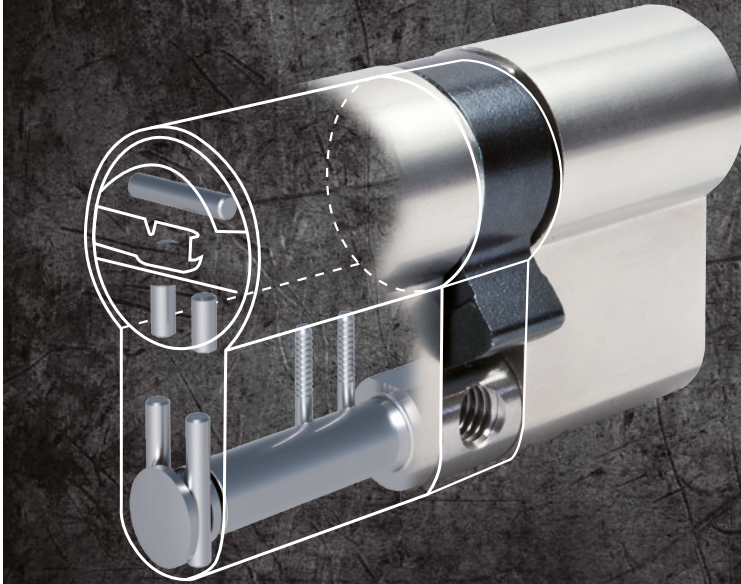

Vela.2000 for master key systems

Security Tech Germany

Vela.2000 MX for single-differ locks and keyed-alike cylinders

Security, hard as steel

The anti-drill inlay, high-strength stainless steel modular threaded bore hole and hardened steel pins provide increased protection against drilling and extraction as standard.

Maximum flexibility

When moving to a new house, the Vela MX cylinder can be quickly adapted to new door dimensions. So the master key system remains in place despite changes to usage and authorisation rights.

Feel secure at home

Quality "Made in Germany"

Our locking cylinders are developed and manufactured in Germany to guarantee the highest quality and a long product life.

Future-proof investment

The Vela system can be expanded at any time. We can deliver expansion products for your locking system many years after installation.

Protecting your privacy

The Inspect System protects the cylinder interior and key against illegal key copying and locking cylinder manipulation.

Greater locking convenience

The modern, attractively shaped reversible key conveniently locks all doors. It is made of low-wear material – so you can use your locking system well into the future.

One key for your entire home

Use just one key to open your building entrance, flat entrance door, letter box, cellar and shed. It is also possible to set up individual locking authorisations for each master key system user.

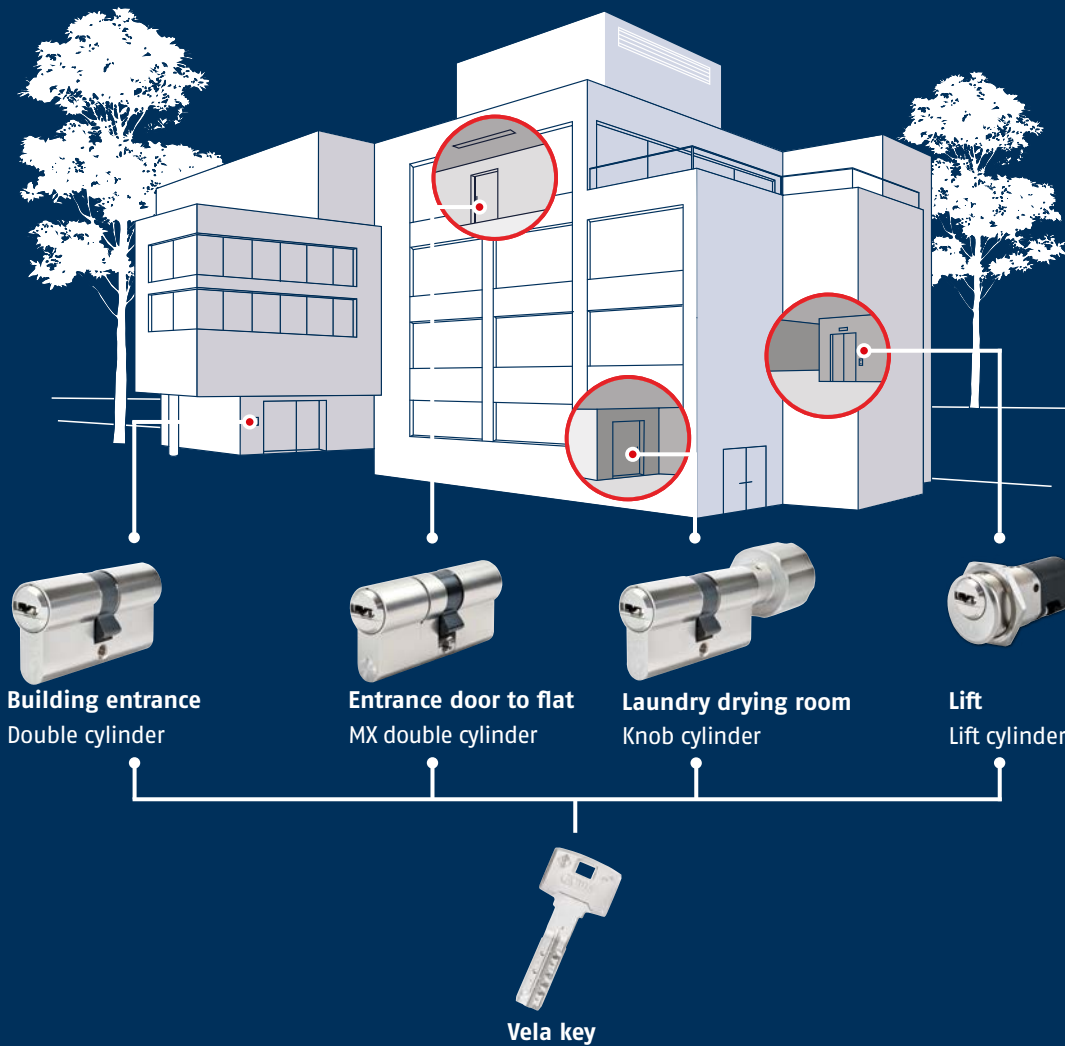

Security Tech Germany

A key for your home

Intelligently networked conventional and modular systems

Example based on an apartment building
